

Parts for Boom Lifts

Boom Lift Parts - Boom Lifts are a table lift piece of equipment that can be raised or lowered to differing heights, making this equipment a practical tool for many industrial applications. There are many unique varieties of Boom Lift consisting of knuckle booms, scissor platform lifts, and aerial lifts, each operating in a different way.

Aerial platform lifts are most frequently used to transport people at snowboard lodges who are not comfortable with a snowboard lift. These lifts operate very similar to an elevator, skiers can be slowly but surely moved up the mountain, stopping at stations along the route until they arrive at the top. Aerial hoists are also utilized in construction, transporting workers safely up and down the sides of multi-level building sites.

Scissor lifts are quite regularly utilized by utility businesses as the perfect method to securely enable staff to fix and work on cables and wires attached to poles. Phone, cable television and power corporations have relied on the efficiency of this kind of boom jack for years.

Knuckle boom lift trucks are built to be utilized in coarse terrain locales where the need to be able to change course is necessary. This style of boom is able to fit into various tight spaces that a scissor lift cannot. Working among numerous machines in a manufacturing facility or in near proximity between two walls, the knuckle boom also features a standard table outfitted with rails for protection and employee safety.

Depending on the job requirements and the nature of job to be completed will determine the appropriate model of boom jack to pick. Fortunately, there is a version suited for practically any purpose.
